EDUCATION

University of California, Davis **September 2022 - June 2026**
B.S. Statistics, B.A. Economics *Davis, CA*

COURSEWORK

Big Data & High-Performance Statistical Computing, Fundamentals of Statistical Data Science, Regression Analysis, Applied Time Series Analysis, Analysis of Variance, Multivariate Data Analysis, Mathematical Statistics

EXPERIENCE

UC Davis Global Affairs **September 2025 - August 2026**
Data Assistant *Davis, CA*

- Streamlined data reporting by transferring and cleaning data from Excel spreadsheets into the university's international programs database, improving accuracy and accessibility of over 10,000 records
- Developed a custom website in HTML, CSS, and JavaScript, integrating a REST API to pull and display live institutional data through a dynamically updating dashboard for 12 staff
- Automated data cleaning and reporting workflows using Power Query and VBA, generating regular reports for supervisors and cutting manual processing time

Elsevier **June 2025 - August 2025**
Data Analyst Intern *San Francisco, CA*

- Evaluated research performance and collaboration patterns across 140+ global institutions through data visualization and exploratory analysis, enabling strategic decision-making for a major R1 university
- Cleaned and transformed 50,000+ data points from bibliometric, grant, and institutional sources using Python, SQL, and Excel to support scalable analysis of research KPIs, including field-weighted citation impact, influence in patents and public policy, top citation percentiles, and international co-authorship intensity
- Applied regression analysis and K-means clustering on bibliometric and funding data to identify key drivers of research impact

UC Davis Department of Economics **March 2025 - June 2025**
Undergraduate Research Fellow *Davis, CA*

- Supported a research project evaluating the effectiveness of natural language processing in identifying government spending news by comparing model results with 2,400+ manually labeled news articles
- Annotated 1,000+ newspaper articles to flag government spending references and construct a benchmark dataset for supervised model evaluation
- Applied NLP techniques in Python using spaCy, including keyword filtering, named entity recognition, and TF-IDF scoring, to classify spending-related content, achieving an AUC of 0.86 in model performance

TECHNICAL SKILLS

Skills: Python, SQL, R, Stata, AWS (Lambda, S3, Athena, CloudFront), Git, API Integration, Excel (Power Query, VBA), Tableau, KPI Dashboards, Salesforce, Regression Analysis, Predictive Analysis
Libraries/Frameworks: pandas, numpy, scipy, statsmodels, spaCy, matplotlib, seaborn, BeautifulSoup, Scrapy, DuckDB

PROJECTS

Housing Affordability Tracker

- Built a serverless AWS pipeline (Python, SQL, Lambda, S3) that ingests ~7M rows of home value, rent, mortgage rate, income, and building permit data weekly from Zillow, Freddie Mac, and the U.S. Census Bureau, runs 48 data quality checks, and publishes a live affordability dashboard and Excel report for 500 U.S. metros

Healthcare Outcomes and Socioeconomic Inequality Analysis

- Developed OLS, multivariate, and logit regression models in Stata to evaluate how income levels, insurance coverage, unemployment, housing, and healthcare access impact preventable hospitalization rates across 3,000+ U.S. counties. Generated insights demonstrating how socioeconomic inequality and limited access to care contribute to higher hospitalization risks

LEADERSHIP

Alpha Sigma Phi - Zeta Gamma Chapter **May 2024 - June 2026**
VP of Finance *Davis, CA*

- Managed a $20,000 annual budget, optimizing expenditures and implementing cost-saving strategies
- Oversaw financial operations, ensuring timely dues collection with structured deadlines and flexible payment plans while maintaining transparency through regular budget reports
- Planned and executed large-scale events, including formals, retreats, and philanthropic initiatives, handling budgeting, logistics, and vendor relations for seamless execution
